A) When testing a user specified chapter;I would remove all the tests done that have that specified chapter to see the response of the program. I could also specify a chapter that is not in the list of chapters provided

B) I would build JUNIT tests for the tests. This test would help know the flow of the program. The tests would basically be unit testing.

C) If the Chapter is not among the specified chapters, The user would not get any output as there would be no array allocation for the chapterQuestionsAnswered and chapterQuestionsCorrect.

D)

Java.lang.Exception

ChapterNotFound
+getMessage():String +chapterNotFound():void +chapterNotFound(message:String):void
